

1. Show the products of 4 of the following 5 reactions (2.5 points each, 10 points total). *There will be no partial credit to this question, so choose wisely.*

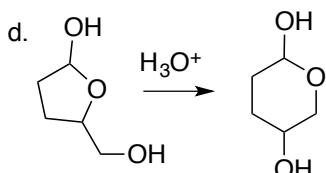

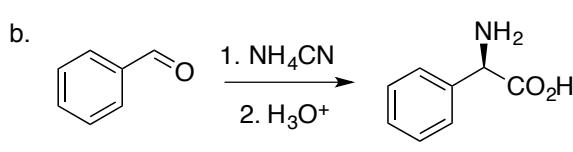

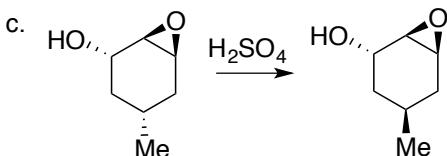

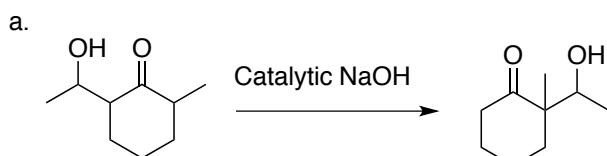

2. Show the reagents necessary to carry out 4 of the following 5 reactions (2.5 points each, 10 points total). *There will be no partial credit, so choose wisely.*

3. Predict the products of 3 of the following 4 reaction, and use a mechanism to support your answer (10 points each, 30 points total).

4. Show a mechanism for 3 of the following 4 transformations (10 points each, 30 points total)

5. Propose a series of reactions for carrying out the following transformation, starting from isopropanol and any other carbon-based reagents you need (10 points each, 20 points total)
